

IRDM memory lineup accelerates with IRDM X DDR4

Wilk Elektronik SA, European manufacturer of memory modules and owner of GOODRAM and IRDM brands, expands its performance RAM memory modules lineup with IRDM X DDR 4 in DIMM form factor.

Poland, Łaziska Górne, 05.12.2017

Manufactured in Poland, IRDM X DDR4 memory modules, are based on the highest quality selected components. X means higher parameters and modified heatsink, compared to standard IRDM memory module.

IRDM X DDR4 memory modules use 8GB per module and are available in single and dual channel configurations (16 GB). Depending on the model IRDM X modules are clocked at 2666, 2800 and 3000 MHz, with CL16 timings. This combination creates an affordable but fast enough module for all types of applications. All module configurations come in 4 different heatsink colors - black, red, blue and white. At the time of the launch there is also a limited multicolor version.

Press release

Simultaneously with the launch of IRDM X, Wilk Elektronik SA launches a limited digital camo version of IRDM DDR4 memory module.

IRDM X DDR4 memory modules are available at popular PC outlets.
