The new Goodram HL200 is an external drive with a capacity of up to 1 TB. It offers almost unlimited possibilities: you can easily make backups, transfer and archive data at home or the office, as well as expand the memory of your console. The HL200 SSD has a compact form factor and is about the size of a credit card.

The Goodram HL200 external drive uses NAND Flash memory, which is widely used in internal and external drives. Thanks to multi-stage testing and high quality components, the drive provides stable and fast read and write speeds even during intensive use.

All GOODRAM drives are manufactured on the basis of carefully selected components and undergo multi-stage quality tests before they go out into the world, which is why we guarantee users a lifetime warranty.
