The ODA3 USB Flash drive enables the use of a single portable memory stick with multiple desktop and mobile devices. It is equipped with two USB connectors – Type-A and Type-C™, allowing you to transfer data between computers and laptops with a classic USB connector and the latest ultrabooks, phones or tablets equipped with the versatile Type-C™ connector.

The ODA3 memory features a robust metal casing which, combined with a rotating connector selection system, provides a durable and practical solution and minimises the risk of losing the plugs.

All GOODRAM USB flash drives are manufactured on the basis of carefully selected components and undergo multi-stage quality tests before they go out into the world, which is why we guarantee users a lifetime warranty.
