The USB 3.2 gen 1 UEC memory stick is an eco-friendly approach to technology. The cases of the memory stick are made of exotic Merbau wood and bamboo. These materials are characterised by unique textures and colour variations.

Merbau wood is very hard and therefore resistant to dents. Due to the original colours and textures of the casing, the UEC memory sticks are perfect as an original gadget or gift for a special occasion.

All GOODRAM USB flash drives are manufactured on the basis of carefully selected components and undergo multi-stage quality tests before they go out into the world, which is why we guarantee users a lifetime warranty.
