UME Eco has 100% biodegradable housing. This means that it will naturally break down without harming the environment. This is a great step forward in reducing e-waste and promoting sustainable technology. Plus, the USB drive still provides reliable and fast data storage, making it an eco-friendly choice without sacrificing functionality.

UME is our proprietary design and an officially registered design. This gives us 100% exclusivity for this unique design. What's more, the material and the housings themselves are provided to us by a Polish, trusted supplier, thanks to which we can freely expand the UME family with new colors and unique views.

All GOODRAM USB flash drives are manufactured on the basis of carefully selected components and undergo multi-stage quality tests before they go out into the world, which is why we guarantee users a lifetime warranty.
