

GOODRAM introduces IRDM DDR4 memory modules, dedicated for gamers, enthusiast and pro users.

Laziska Górne, 12.04.2017

Wilk Elektronik SA, European manufacturer of memory products and owner of the GOODRAM brand, expands its performance-oriented lineup by adding IRDM DDR4 memory modules, which combine good design with high performance, reliability and affordability. It is another step in creating a complete lineup of IRDM branded products.

IRDM DDR4 memory modules are manufactured in Poland, based on selected memory chips. Demanding in-house tests of 100% of components as well as complete modules, ensure the highest quality of finished products. IRDM modules are enclosed in sleek heat-dissipating radiators, to provide stable memory operation.

International success of the Iridium PRO SSD showed us, that our customers are looking for top tier solutions, which guarantee high quality and reliability. At the same time pricing is still considered a major part in the decision making process – says Wiesław Wilk, CEO of Wilk Elektronik SA. For our company – participating in the DRAM market for over

Press release

25 years – memory modules are the natural expansion of our lineup dedicated for the most demanding users.

IRDM memory modules are available in capacities between 4 and 8 GB and up to 16GB in dual channel. They run at 2400MHz with 15-15-15 timings. Just like other memory modules manufactured by the Polish manufacturer, IRDM DDR4 are covered under lifetime warranty with free technical support.

The release of new IRDM memory modules will be followed up by the rebranding of IRIDIUM lineup. Wilk Elektronik is planning to create a strong international brand dedicated for gamers and users looking for the fastest products and attractive design. Additionally, in the following months, DRAM modules lineup will be updated with two new products –IRDM PRO and IRDM ULIMATE
